

Low Cost Product Line Introduced by ClimateMaster

Oklahoma City, OK – The new low cost GC (Genesis Compact model) has been added to the long line of advanced water source heat pumps offered by ClimateMaster. This uniquely designed unit is replacement compatible with hundreds of thousands of older water source heat pumps. The GC is specifically designed for boiler-tower applications where low first cost and small cabinet size is important.

ClimateMaster designed the GC with a variety of beneficial features, including: compact cabinet design intended as a replacement unit for existing water-source heat pumps, low first cost, meets new federal minimum efficiency requirements, high static blower options, and improved sound performance using a tray mounted compressor double isolation design. Horizontal cabinet sizes are available from 1.5 tons to 5 tons.
